

How it works:

Copy the prompt, upload any image you want to transform, and let AI create a soft handcrafted paper-cut illustration with layered details, pastel colors, and a storybook-like finish.

Food Photography Prompt:

“Create a minimalist D2C food product image using the uploaded image as the hero food item.

Enhance the presentation to feel premium, appetizing, realistic, and high-converting while maintaining a clean high-end D2C aesthetic.

Background: Use a soft neutral gradient from warm beige to off-white. Keep it clean, minimal, and slightly lifestyle-oriented, not sterile.

Surface: Place the food on a premium matte surface such as stone, ceramic, fabric, or a subtle natural texture. The surface should feel refined, realistic, and slightly imperfect.

Lighting: Use soft diffused lighting with gentle directional shadows, slightly warm tones, and natural highlights to enhance the texture, freshness, and depth of the food.

Composition: Keep the layout balanced but slightly dynamic. Position the food slightly off-center with generous negative space, visually pleasing plating, and a premium editorial feel.

Enhancement: Improve clarity, texture, and depth. Subtly increase vibrancy and contrast to make the food look fresh and appetizing. Add a slight natural gloss where appropriate, but keep the result realistic and not over-processed.

Depth of Field: Use a shallow depth of field with sharp focus on the food and a soft background falloff.

D2C Cues: Add light lifestyle realism with minimal, relevant props such as cutlery, ingredients, napkins, or serving elements if needed. Avoid over-staging. Keep the scene natural, premium, and modern.

Style: Ultra-clean premium food photography, high-end but natural, sharp focus, soft contrast, realistic textures, modern D2C product styling, 8K quality.

Important: Do not include any text, typography, logos, watermark, packaging labels, or branding in the image.”
